Mini App Roadmap

Description:

Create an app that displays some Mini models and their corresponding data from a database. This will be done using everything that we have learned so far, including SASS, VUE, AJAX, databases and Fetch.

Steps:

1. Create a database in MySQL that includes the titles seen below
2. Create the app design and make it responsive
3. Use class files as a reference to link the database to the app
4. Make sure everything is working

Considerations:

-when creating the database, make sure to use correct types (varchar/int…) for each name

-make sure to run code through Postman to check if the backend is working correctly

Database Setup:

1. ID
2. Avatar
3. Name
4. Lineup
5. Description
6. Price
7. Engine Architecture
8. Transmission
9. Promo Image
